

Vera C. Rubin Observatory Rubin Observatory Operations

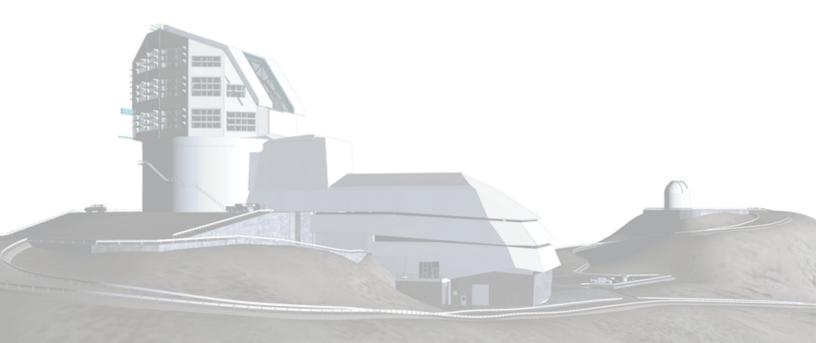

Pixel Zone system security plan

William O'Mullane

RTN-082

Latest Revision: 2024-07-15

DRAFT

Abstract

This document provides the mapping to NIST800-171 for the Rubin Pixel Zone.

Pixel Zone system security plan

1 Introduction and Scope

Vera C. Rubin Observatory will observe the night sky with unprecedented frequency and depth. Per DMTN-199, NIST.SP.800-171r3 is applicable to our pixel data. This document provide the security plan for the *Pixel Zone* which encompasses the areas where data is held in NSF facilities. The SLAC facilities are covered in *NEED REF*.

In accordance with NIST.FIPS.200 and DMTN-199 the security category is:

$$SC_{PixelZone} = \{(confidentiality, moderate), (integrity, low), (availability, low)\}$$
 (1)

The technology implementation details may be found in ITTN-074.

This plan should be reviewed at least annually.

2 Minimum security requirements

NIST.FIPS.200 declares 17 security related areas that should be covered, each is given a sub section here. A detailed compliance with NIST.SP.800-171r3 is given in Appendix A. Here we also mention the controls, as outlined in the CUI overlay of NIST.SP.800-171r3, we aim to implement in each section.

2.1 Access Control (AC)

Access to the *Pixel Zone* is restricted to approved account holders. See ITTN-010 and ITTN-045 (AC-01 Policy and Procedures).

Account creation is tracked with Jira tickets and requires manager approval (AC-02 Account Management).

Unix groups are used to restrict individual user access and effectively provide account types

DRAFT 1 DRAFT

(AC-03 Access Enforcement). Sudo is used for escalation by users who are allowed privileged access - use is logged.

DMTN-199 defines the control flow for pixel data (AC-04 Information Flow Enforcement).

Accounts are locked out after 6 failed attempts to log in (AC-07 Unsuccessful Logon Attempts).

Message of the day shall declare the Pixel zone security (Use Notification AC-08).

Sessions are terminated every 24 hours (AC-12 Session Termination).

Remote access is granted via an group membership. 2FA VPN is required for any remote access (remote access AC-17).

Access to summit WiFi is controlled via registered MAC address. Even on the summit WiFi VPN login is required to access the *Pixel Zone* (wireless access AC-18).

We do not allow pixel data to be copied to external devices (External System AC-20).

We have no public access (AC-22 Publicly Accessible Content)

We do not use specific *-admin* accounts - our team is small and we find such accounts less secure.

We shall review group membership for summit access at least once per year.

2.2 Awareness and Training (AT)

The access control plan (Marshall, ACP) indicates training etc. RTN-073 provides guidelines for embargo data access. Specific guidelines on communication channels have been shared with users in DMTN-286. (AT-01 Policy and Procedures)

Embargo training is mandatory for all users with access to pixel data within the embargo period. (AT-02 Literacy Training and Awareness) Training will be renewed annually.

DRAFT 2 DRAFT

2.3 Audit and Accountability (AU)

An *Observability system* has been built, on contract ITTN-070, to make this information useful to find incursions and anomalies(AU-02 Event Logging, AU-03 Content of Audit Records, AU-07 Audit Record Reduction and Report Generation, AU-12 Audit Record Generation).

Logs shall also be sent to the Research SOC for review (AU-06 Audit Record Review, Analysis, and Reporting).

Audit records have UTC timestamps (AU-08 Time Stamps).

We shall have sufficient log storage, currently 70TB, for 2 years of logs (AU-04 Audit Log Storage Capacity).

Logs shall be kept for at least 2 years (AU-11 Audit Record Retention).

Squadcast is used for alerting on system failures (AU-05 Response to Audit Logging Process Failures).

Logs and audit information are secured for access only by the Chile DevOps team(AU-09 Protection of Audit Information).

2.4 Certification, Accreditation, and Security Assessments (CA)

We are a small team however we regularly assess our security posture and adjust where needed (CA-02 Control Assessments). We shall carry out PEN testing nominally annually but at least every other year. Training was organised for the Chile DevOps team and some individuals will pursue accreditation/certification.

2.5 Configuration Management (CM)

Higher level or broader changes go to an operations CCB RTN-072 (CM-01 Policy and Procedures). Otherwise we run almost exclusively infrastructure as code - our baseline is in github. Changes follow the DM change process - reviews and tests required for any change (CM-03 Configuration Change Control).

DRAFT 3 DRAFT

The applications deployed and their configurations are all dealt with via our phalanx¹ system (CM-02 Baseline Configuration, CM-08 System Component Inventory).

Pixel data is only located in the pixel zone and embargo rack (CM-12 Information Location).

We do not have a definitions of high-risk areas and therefore we do not apply specific configurations to devices during travel.

2.6 Contingency Planning (CP)

Disaster recovery and incident reporting is covered in RTN-030 (CP-01 Policy and Procedures)

2.7 Identification and Authentication (IA)

IA is covered in ITTN-010 (IA-01 Policy and Procedures). Users are associated with their unique accounts (IA-02 Identification and Authentication). Re-authentication is once per 24 hours (IA-11 Re-Authentication).

Access to the *Pixel Zone* is via 2FA VPN. Devices connection to our networks are know by MAC address.

Typically 1password generated passwords are used and any sharing is done using vaults (IA-05 Authenticator Management). Passwords must by at least 8 chars, use 2 character classes and can not be reused for 10 goes.

All new users are known to admins or confirmed by a manager (IA-12 Identity Proofing).

2.8 Incident Response (IR)

Incident response is covered in RTN-030 §3 (IR-01 Policy and Procedures).

1https://phalanx.lsst.io

DRAFT 4 DRAFT

2.9 Maintenance (MA)

We have weekly maintenance windows for summit systems, one each for Infrastructure, Applications, and Control System (MA-01 Policy and Procedures)

Activities are tickets and discussed in stand up meetings (MA-02 Controlled Maintenance).

All tools go through the usual procurement process and maintenance equipment does not and will not hold pixel data (MA-03 Maintenance Tools).

Maintenance is carried out by our personnel (MA-05 Maintenance Personnel).

2.10 Media Protection (MP)

Pixel Zone is all about protecting data in the embargo period as per DMTN-199 (MP-01 Policy and Procedures).

Access is controlled via IPA groups and 2Fa VPN (MP-02 Media Access). Data will never be on removable media. We do not allow media to be mounted to machines int he pixel zone.

Pixel data exists on disk in only three locations during the embargo period, there are no further backups of this so no copy on removable media.

2.11 Physical and Environmental Protection (PE)

Computer rooms have key card access and are restricted to a limited number of personnel (PE-02 Physical Access Authorizations, PE-03 Physical Access Control). Racks have further locks and door sensors installed. There are cameras with motion detection functions installed in the computer rooms.

The DWDM (transmission devices) are within the controlled computer room in a locked rack (PE-04 Access Control for Transmission).

Access is logged and logs are kept for up to three years, all the equipment being installed is HID and complies with section 889 of the John S. McCain National Defense Authorization Act

DRAFT 5 DRAFT

(NDAA) (PE-06 Monitoring Physical Access).

Remote work is allowed from anywhere with access via 2FA VPN (PE-17 Alternate Work Site).

2.12 Planning (PL)

RTN-030 provides pointers to the many information security related documents (PL-01 Policy and Procedures).

Rubin has an acceptable use policy augmented by RTN-073 and DMTN-286 for embargoed data (PL-04 Rules of Behavior).

2.13 Personnel Security (PS)

Only team members will have access to embargo images. All staff are known individuals screened on hiring (PS-01 Policy and Procedures, PS-03 Personnel Screening). In kind contributors working with data are known scientists and all go though FACTs checks to get accounts at USDF.

Where appropriate on termination all account access is removed - some off-boards remain collaborators (PS-04 Personnel Termination).

2.14 Risk Assessment (RA)

This is part of our regular risk assessment process RDO-71 but we also look in depth at specific applications(RA-01 Policy and Procedures).

Mostly we have concentrated the application exposure in phalanx which is carefully assessed and monitored. However we do perform specific security risk assessment where it is considered most needed e.g. SQR-041 for the science platform which is one of our major attack surfaces (RA-03 Risk Assessment).

We have conducted external PEN testing and shall do so annually in addition to using available scanning tools (RA-05 Vulnerability Monitoring and Scanning).

DRAFT 6 DRAFT

2.15 System and Services Acquisition (SA)

Security for our external facing applications have been encapsulated in Phalanx. (SA-01 Policy and Procedures) This allows a single team to take care of AAA for all applications to minimize the attack surface. The number of applications which can touch the embargoed data is also small and they are behind the 2Fa VPN.

We apply several principles: (SA-08 Security and Privacy Engineering Principles):

- · Least Privilege: we try to reduce the number of accounts with privileges
- Minimize attack surface: phalanx really helps with this but also using 2FA and VPN for pixel zone.
- Access control mechanisms: we use tokens for inter application access
- Defense in depth: we are attempting to know when we have been hit
- Open design: our security does not rely on secrecy of design our designs are public
- Economy of mechanism: we always attempt the simplest solution

Our policy is to replace components before they reach EOL (SA-22 Unsupported System Components).

2.16 System and Communications Protection (SC)

DMTN-286 and SITCOMTN-076 cover communication for embargoed data (SC-01 Policy and Procedures).

Embargo data are kept on encrypted disks using OS level encryption (SC-04 Information in Shared System Resources). 2FA VPN is required to access the *Pixel Zone*. We isolate internal traffic on different VLANs. Bastion hosts are used for access to deeper internal systems.

Border firewalls prevent some repeated attacks, confirmed by PEN testing (SC-05 Denial-of-service Protection, SC-07 Boundary Protection).

DRAFT 7 DRAFT

Data transmission to SLAC is via secure routers with AES-256 encryption (SC-08 Transmission Confidentiality and Integrity).

Connections are rest each 24 hour period (SC-10 Network Disconnect).

Encryption keys are managed by specific key services (SC-12 Cryptographic Key Establishment and Management).

Embargo data are kept on encrypted disks using OS level encryption at rest (SC-28 Protection of Information at Rest).

2.17 System and Information Integrity (SI)

RTN-030 details specific policies (SI-01 Policy and Procedures).

We respond immediately to any security issue. It receives top priority. Reported vulnerabilities are dealt with within 24 hours (SI-02 Flaw Remediation).

A Compliance with NIST800.171

Please note the following definitions:

- Waiver not applicable to the operation
- Variance cannot be implemented due to operational constraints but have a compensating control applied
- Exception cannot be implemented due to operational constraints (no compensating control applied)

Table 1: This table provides an overview of the NIST.SP.800-171r3 and Rubin compliance with it.

DRAFT 13 DRAFT

00.000.41	1 1/	Lv	
03.06.04 Incident Response Training	Υ	Y	Cyber training includes user level incident response i.e. who to re-
a. Provide incident response training to system users consistent with assigned roles			port attempts to.
and responsibilities:			
1. Within [Assignment: organization-defined time period] of assuming an incident			
response role or responsibility or acquiring system access,			
2. When required by system changes, and			
3. [Assignment: organization-defined frequency] thereafter.			
b. Review and update incident response training content [Assignment: organization-			
defined frequency] and following [Assignment: organization-defined events].			
03.06.05 Incident Response Plan	Υ	Y	RTN-030 Section 3.
a. Develop an incident response plan that:			
1. Provides the organization with a roadmap for implementing its incident response			
capability,			
2. Describes the structure and organization of the incident response capability,			
3. Provides a high-level approach for how the incident response capability fits into			
the overall organization,			
4. Defines reportable incidents,			
5. Addresses the sharing of incident information, and			
6. Designates responsibilities to organizational entities, personnel, or roles.			
b. Distribute copies of the incident response plan to designated incident response			
personnel (identified by name and/or by role) and organizational elements.			
c. Update the incident response plan to address system and organizational changes			
or problems encountered during plan implementation, execution, or testing.			
d. Protect the incident response plan from unauthorized disclosure.

DRAFT 14 DRAFT

03.08.07 Media Use	N	Y	Can be rolled out with puppet but there are some servers require
a. Restrict or prohibit the use of [Assignment: organization-defined types of system			USB to be enabled but are in the server room. We can disable USB
media].			disk mounts at OS level. The machines and filesystem are encrypted
b. Prohibit the use of removable system media without an identifiable owner.			so even if someone rebooted a node from a device to allow mount-
			ing USB they still could not get any data.
03.08.08 Withdrawn	W		Withdrawn in revision 3
03.08.09 System Backup – Cryptographic Protection	Υ	Υ	Pixel data is in only three locations - two in Chile and SLAC. There are
a. Protect the confidentiality of backup information.			no backups during embargo.
b. Implement cryptographic mechanisms to prevent the unauthorized disclosure of			
CUI at backup storage locations.			
3.9 PERSONNEL SECURITY			
03.09.01 Personnel Screening	Υ	Y	Only project team members will have access to early images - all are
a. Screen individuals prior to authorizing access to the system.			known individuals screened on hiring. This doesn't suggest back-
b. Rescreen individuals in accordance with [Assignment: organization-defined condi-			ground security screening and it was also explicitly not required by
tions requiring rescreening].			the agencies in section 2 of the requirements document.
1 0	Υ	V	
03.09.02 Personnel Termination and Transfer	Y	Y	This is the off boarding policy. Note that many collaborators retain
a. When individual employment is terminated:			some level of access even when off boarded.
Disable system access within [Assignment: organization-defined time period],			
2. Terminate or revoke authenticators and credentials associated with the individual,			
and			
Retrieve security-related system property.			
b. When individuals are reassigned or transferred to other positions in the organiza-			
tion:			
Review and confirm the ongoing operational need for current logical and physical			
access authorizations to the system and facility, and			
2. Modify access authorization to correspond with any changes in operational need.			
3.10 PHYSICAL PROTECTION			
03.10.01 Physical Access Authorizations	Υ	Y	This physical access includes locks on server cabinets and key card
a. Develop, approve, and maintain a list of individuals with authorized access to the			access in base. (Contracted for summit computer room)
facility where the system resides.			,
b. Issue authorization credentials for facility access.			
c. Review the facility access list [Assignment: organization-defined frequency].			
d. Remove individuals from the facility access list when access is no longer required.			
	Υ	Y	Security is in place on Cerro Pachon and at the entrance to the moun-
03.10.02 Monitoring Physical Access	1	T T	
a. Monitor physical access to the facility where the system resides to detect and re-			tain - though not only for Rubin so not permanently at the observa-
spond to physical security incidents.			tory.
b. Review physical access logs [Assignment: organization-defined frequency] and			
upon occurrence of [Assignment: organization-defined events or potential indica-			
tions of events].

03.17.02 Acquisition Strategies, Tools, and Methods	N	W	Not applicable for this project.
Develop and implement acquisition strategies, contract tools, and procurement			
methods to identify, protect against, and mitigate supply chain risks.	N	W	Not applicable for this project
03.17.03 Supply Chain Requirements and Processes a. Establish a process for identifying and addressing weaknesses or deficiencies in	IN	VV	Not applicable for this project.
the supply chain elements and processes.			
b. Enforce the following security requirements to protect against supply chain risks			
to the system, system components, or system services and to limit the harm or con-			
sequences from supply chain-related events: [Assignment: organization- defined se-			
curity requirements].			
Total NIST800-171 requirements		98	
Total Rubin Intends to comply fully with		94	
Total Rubin Complies with in 2024		84	
Total Rubin waivers requested		4	
Total Rubin variances in 2024		5
